XX      Determining a bacterium species comprises providing oligonucleotide
XX      primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX      Disclosure; SEQ ID NO 6; 74pp; English.
XX      The invention relates to a method (M1) for determining a bacterium
XX      species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
XX      extracting a genomic nucleotide from the bacterium to provide a
XX      nucleotide template; (c) annealing a region of a nucleotide template to a
XX      specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
XX      complimentary fashion, the primer set designed to provide a product
XX      having a predetermined size dictated by a complementary primer set; (d)
XX      amplifying the region of the nucleotide template to produce the product;
XX      and (e) determining a species of a bacterium in a nucleotide sequence of
XX      the product. Also described is an alternative method (M2) for determining
XX      a bacterium species comprising: (a) providing a specimen or a sample
XX      having a template; (b) providing a pair of primers selected from: (i) a
XX      first forward primer having consecutive bases of an AFB-f comprising any
XX      of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
XX      or variations and a first reverse primer having consecutive bases of an
XX      AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
XX      or their fragments or variations, (ii) a second forward primer having
XX      consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
XX      bp (AEA22489-AEA22516) or their fragments or variations and a second
XX      reverse primer having consecutive bases of an UB-r comprising any of the
XX      28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
XX      variations, or (iii) a first forward primer having consecutive bases of
XX      an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
XX      second reverse primer having consecutive bases of an UB-r of AEA22517-
XX      AEA22544 or their fragments or variations; (c) the specimen; and (d)
XX      comparing the product from the specimen with a nucleotide sequence from a
XX      database to determine the bacterium species present in the specimen. The
XX      methods are useful for determining a bacterium species. The present
XX      sequence represents a Mycobacterium fortuitum 16S rRNA nucleotide
XX      sequence, which is used in the exemplification of the present invention.

XX
XX Determining a bacterium species comprises providing oligonucleotide
XX primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX
XX Disclosure; SEQ ID NO 13; 74pp; English.
XX
XX The invention relates to a method (M1) for determining a bacterium
XX species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
XX extracting a genomic nucleotide from the bacterium to provide a
XX nucleotide template; (c) annealing a region of a nucleotide template to a
XX specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
XX complimentary fashion, the primer set designed to provide a product
XX having a predetermined size dictated by a complimentary primer set; (d)
XX amplifying the region of the nucleotide template to produce the product;
XX and (e) determining a species of a bacterium in a nucleotide sequence of
XX the product. Also described is an alternative method (M2) for determining
XX a bacterium species comprising: (a) providing a specimen or a sample
XX having a template; (b) providing a pair of primers selected from: (i) a
XX first forward primer having consecutive bases of an AFB-f comprising any
XX of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
XX or variations, and a first reverse primer having consecutive bases of an
XX AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
XX or their fragments or variations, (ii) a second forward primer having
XX reverse primer having consecutive bases of an UB-r comprising any of the
XX 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
XX variations, or (iii) a first forward primer having consecutive bases of
XX an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
XX second reverse primer having consecutive bases of an UB-r of AEA22517-
XX AEA22544 or their fragments or variations; (c) the specimen; and (d)
XX comparing the product from the specimen with a nucleotide sequence from a
XX database to determine the bacterium species present in the specimen. The
XX methods are useful for determining a bacterium species. The present
XX sequence represents a Mycobacterium mucogenicum 16S rRNA nucleotide
XX sequence, which is used in the exemplification of the present invention.

XX Detecting Mycobacterium species, involves in vitro amplification of 16S
XX rRNA or DNA encoding RNA in nucleic acid amplification mixture using
XX specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 36; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX them. The method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a PCR primer used for
XX amplifying Mycobacterium 16S rRNA

PT microorganism for specific detection and identification of the
PT microorganism in foods and drug compositions.
XX
PS Claim 2; SEQ ID NO 150; 150pp; Japanese.
XX
XX The present invention relates to probes (ADP93908-ADP94059) for the
CC specific detection and identification of harmful microorganisms in
CC samples of foods and drug compositions. The probe sequences are derived
CC from the V1, V2 and/or V3 regions of the 16S rRNA of the microorganism,
CC or its complementary sequence. Detection and identification of the
CC microorganism is by amplification of the complete 16S rRNA gene using
CC primers ADP94060 and ADP94061, labelling the amplification product (a
CC fluorescence label is preferred), and hybridising to the probe or probes
CC of the invention. The probes may be immobilised on a DNA chip. The
CC microorganism is selected from Actinobacillus actinomycetocombitans,
CC Acinetobacter calcoaceticus, Haemophilus influenzae, Stenotrophomonas
CC maltophilia, Proteus mirabilis, Streptococcus pneumoniae, Pseudomonas
CC aeruginosa, Citrobacter freundii, Veillonella parvula, Providencia

XX PT Novel Streptomyces sp. produced polypeptide for hydroxylation of
PT compactin at 6beta-position and its encoded DNA, applicable in
PT constructing transformant microbes to synthesize pravastatin for treating
PT hyperlipedemia.
XX PS Disclosure; Page 50-51; 67pp; Japanese.
XX CC The present invention describes a DNA sequence which contains a base
CC sequence from bases 544-1758 in the sequence of (1) with 1992 base pairs,
CC or a DNA hybridisable with the DNA under stringent conditions and
CC encoding a polypeptide with hydroxylase activity on compactin at 6beta-
CC position. Also described: (1) DNA containing base sequences from bases
CC 544-1758 and from bases 1782-1970 in the sequence of (1) or a DNA
CC hybridisable with the DNA under stringent conditions and encoding a
CC polypeptide with hydroxylase activity on compactin at the 6beta-position;
CC (2) a polypeptide encoded by any of the DNA or containing an amino acid
CC sequence based on the polypeptide but with some amino acids deleted,
CC substituted or added and having hydroxylase activity on compactin at the
CC 6beta-position; (3) a recombinant DNA obtained by integrating with any of
CC the DNA; (4) a microorganism transferred with the recombinant DNA; (5) a
CC process for producing pravastatin by culturing the transformant
CC microorganism before isolating the culture liquor or cells, and addition
CC of compactin for reaction to give pravastatin for recovery; and (6)
CC Streptomyces sp. TM-6 (FERM BP-8002) or TM-7 (FERM BP-8003). (1) has
CC antilipaeamic activity. The polypeptide and its encoded DNA are applicable
CC in constructing transformant microorganisms to synthesise pravastatin for
CC treating hyperlipidaemia. With the recombinant microorganisms,
CC pravastatin can be produced efficiently, with much less galpha
CC hydroxylated epimer formed. The present sequence represents a
CC Microtrasporea recticata IF014525 nucleotide sequence, which is given
CC in the exemplification of the present invention

PT quantitative measurement of cyclosporin A in blood, by incubating
PT cyclosporin A in presence of Dactyloporangium and extracting cyclosporin
PT derivative.
XX PS Disclosure; SEQ ID NO 2; 12pp; Japanese.
XX CC The invention relates to a novel method for producing a cyclosporin
CC derivative. The method involves incubating cyclosporin A in the presence
CC of a strain belonging to Dactyloporangium, Streptomyces, Nocardia,
CC Pseudonocardia or Streptosporangium or its cultured microbial cells and
CC extracting the cyclosporin derivative from the incubated liquid. The
CC cyclosporin derivative is used as a reference standard for quantitative
CC measurement of cyclosporin A and its metabolite in blood and urine. This
CC polynucleotide represents a Streptosporangium 16S rDNA sequence used in
CC the cyclosporin production method of the invention.

 XX Novel cyclic hydrocarbon degrading Rhodococcus species GR-002 strain
 PT having biochemical properties e.g. gram positive bacillus, catalase test
 PT positive, pyrazinamidase negative, useful for degrading waste engine oil.
 XX Claim 2; SEQ ID NO 1; 13pp; Japanese.
 XX The invention relates to a novel cyclic hydrocarbon degrading agent from
 CC the Rhodococcus genus. The cyclic hydrocarbon degrading agent having
 CC biochemical properties such as: gram positive bacillus, catalase test
 CC positive, nitrate-reduction ability positive, pyrazinamidase negative,
 CC pyrrolidonyl allyl amidase negative, alkali phosphatase positive, beta-
 CC glucuronidase negative, beta-galactosidase negative, alpha-glucosidase
 CC positive, N-acetyl-beta-glucosaminidase negative, urease positive. The
 CC novel Rhodococcus microorganism is Rhodococcus sp. GR-002 strain having
 CC the accession number FERM P-18804. The cyclic hydrocarbon degrading agent
 CC is useful for processing a cyclic hydrocarbon-containing substance, such
 CC as a waste engine oil. The novel Rhodococcus microorganism is useful for
 CC degrading cyclic hydrocarbons containing aromatic hydrocarbons, such
 CC cycloaliphatic hydrocarbons, and/or polycyclic aromatic hydrocarbons.
 CC This polynucleotide represents the novel Rhodococcus microorganism 16S
 CC rDNA sequence of the invention.

New abyssomicin polycyclic macrolactone compounds, useful as antibiotics
and antiprotozoal agents effective against multiresistant strains,
prepared using bacteria of genus Verrucosisspora.
XX
Disclosure; SEQ ID NO 1; 47pp; German.
XX
This invention describes novel polycyclic macrolactones and their
derivatives , prepared using bacteria of genus Verrucosisspora and
designated abyssomicins. The polycyclic macrolactones have at least one
oxa-bicyclo system as a partial structure and at least one Michael system
as double bond system. The polycyclic macrolactones are prepared by
culturing Verrucosisspora strain AB 18-032, recovering a culture
supernatant from the culture, optionally preparing a culture filtrate and
optionally isolating one or more polycyclic macrolactones from the
supernatant and/or filtrate. Alternatively the microorganism is cultured
followed by isolating one or more polycyclic macrolactones from the
microorganism. The Verrucosisspora strain AB 18-032 was isolated from
marine sediment collected at a depth of 1000m in Sagami bay in the
Japanese sea and is deposited as DSM No. 15899. The polycyclic
macrolactones inhibit the biosynthesis of p-Aminobenzoic acid, (an
essential component in the biosynthesis of folic acid) from chorismic
acid, thus inhibiting folic acid biosynthesis. The vitamin folic acid is
essential to the life of microorganisms, especially prokaryotes and
protozoa. The polycyclic macrolactones do not inhibit the biosynthesis of
folic acid in mammals (including humans), and thus have no adverse
effects on mammalian cells. Three polycyclic macrolactones are
specifically claimed, i.e. abyssomicin B, abyssomicin C and abyssomicin

```

```

CC D. Abyssomicin C strongly inhibited growth of methicillin-resistant
CC Staphylococcus aureus strain N315 and vancomycin-resistant Staphylococcus
CC aureus strain Mu50. The products of the invention are useful as
CC antibiotics (especially effective against Gram positive bacteria) and
CC antiprotozoal agents, specifically effective against bacteria and
CC protozoa resistant (especially multi-resistant) to conventional
CC antibiotics. Typically polycyclic macrolactones are useful for combating
CC tropical protozoal diseases (e.g. malaria, leishmaniasis, sleeping
CC sickness and Chagas disease) and infections caused by resistant Gram
CC positive bacteria such as methicillin- and vancomycin-resistant
CC Staphylococcus aureus strains. Polycyclic macrolactones are also useful
CC as disinfectants (especially in hospitals and other medical
CC establishments) and as lead structures for the development of further
CC active agents. This sequence represents the Verrucosisspora strain AB 18-
CC 032 16S rRNA DNA which is used to phylogenically classify the bacterial
CC strain.

PT	Determining a bacterium species comprises providing oligonucleotide
PT	primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX	
PS	Disclosure; SEQ ID NO 7; 74pp; English.
XX	
CC	The invention relates to a method (M1) for determining a bacterium
CC	species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
CC	extracting a genomic nucleotide from the bacterium to provide a
CC	nucleotide template; (c) annealing a region of a nucleotide template to a
CC	specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
CC	complimentary fashion; the primer set designed to provide a product
CC	having a predetermined size dictated by a complementary primer set; (d)
CC	amplifying the region of the nucleotide template to produce the product;
CC	and (e) determining a species of a bacterium in a nucleotide sequence of
CC	the product. Also described is an alternative method (M2) for determining
CC	a bacterium species comprising: (a) providing a specimen or a sample
CC	having a template; (b) providing a pair of primers selected from: (i) a
CC	first forward primer having consecutive bases of an AFB-f comprising any
CC	of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
CC	or variations and a first reverse primer having consecutive bases of an
CC	AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
CC	or their fragments or variations, (ii) a second forward primer having
CC	consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
CC	bp (AEA22489-AEA22516) or their fragments or variations and a second
CC	reverse primer having consecutive bases of an UB-r comprising any of the
CC	28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
CC	variations, or (iii) a first forward primer having consecutive bases of
CC	an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
CC	second reverse primer having consecutive bases of an UB-r of AEA22517-
CC	AEA22544 or their fragments or variations; (c) the specimen; and (d)
CC	comparing the product from the specimen with a nucleotide sequence from a
CC	database to determine the bacterium species present in the specimen. The
CC	methods are useful for determining a bacterium species. The present
CC	sequence represents a Mycobacterium gordonae 16S rRNA nucleotide
CC	sequence, which is used in the exemplification of the present invention.

 DR Novel antibiotics isolated from fermentation broth of novel strain of
 XX Microbispora corallina, useful for treating a wide range of bacterial
 PT infections.
 PT Disclosure; SEQ ID NO 1; 20pp; English.
 PS The invention relates to antibiotic MF-BA-1768alpal or MF-BA-1768-betal
 XX or its pharmaceutically acceptable salt, having physicochemical
 CC characteristics in the non-salt form as detailed in the specification.
 CC The antibiotics are isolated from a novel strain of Microbispora
 CC corallina designated NRRL 30420. Also included are producing the above
 CC antibiotic (by cultivating Microbispora corallina NRRL 30420, or an
 CC antibiotic MF-BA-1768alpal or MF-BA-1768betal -producing mutant,
 CC variant or its recombinant form, in a culture medium containing
 CC assimilable sources of carbon, nitrogen and inorganic salts under aerobic
 CC fermentation conditions until the antibiotic is produced and then
 CC recovering the antibiotic) and a composition comprising the above
 CC antibiotic or its salt. The antibiotics are useful for treating a
 CC bacterial infection caused by Staphylococcus (e.g. S. aureus, S. epidermis
 CC, S. haemolyticus), Enterococcus (e.g. E. faecalis, E. faecium),
 CC Streptococcus (e.g. S. pneumoniae, S. pyogenes), Haemophilus (e.g.
 CC H. influenzae) or Escherichia (e.g. E. coli) in a patient. The present
 CC sequence is partial 16S rRNA sequence from M. corallina NRRL 30420, which
 CC identifies the strain.

PT Novel nucleic acid fragment useful for converting ketone substrates to
XX the corresponding lactone or ester, is isolated from Rhodococcus,
PT Arthrobacter or Acidovorax, encoding Baeyer-Villiger monooxygenase
PT polypeptide.
XX
PS Claim 54; SEQ ID NO 6; 225pp; English.
XX
XX The invention relates to a novel isolated nucleic acid fragment
CC comprising a fragment encoding a Baeyer-Villiger (BV) monooxygenase
CC polypeptide having a sequence of 542, 541, 439, 518, 462, 523, 493, 539,
CC 649, 494, 499, 545, 532 or 538 amino acids defined in the specification;
CC a nucleic acid molecule that hybridises with the above sequence under the
CC hybridisation conditions; or their complements. The BV monooxygenase
CC fragment is useful for obtaining a nucleic acid fragment encoding a BV
CC monooxygenase polypeptide, by probing a genomic library with the
CC fragment, identifying a DNA clone that hybridises with the fragment, and
CC sequencing the genomic fragment that comprises the above identified
CC clone, where the sequenced genomic fragment encodes a BV monooxygenase
CC polypeptide. The genes and their products are useful for converting
CC suitable ketone substrates to the corresponding lactone or ester. This
CC polynucleotide sequence represents the 16S rRNA gene from Arthrobacter
CC sp. BP2 relating to the Baeyer-Villiger enzymes of the invention.

of pre-rRNA by lysis.
XX
XX Example 4; Col 17-18; 50pp; English.
XX
CC This sequence represents a target sequence for mycobacterial probes. This
CC sequence represents a precursor RNA fragment that is released during the
CC method of the invention. The method is for the determination of
CC mycobacterial cell sensitivity to an antimicrobial agent, and comprises:
CC (a) culturing the cells in the presence of the antimicrobial agent; (b)
CC treating the cells by enzymatic or mechanical means to expose the cell
CC membrane to lysis reagents, and contacting the cells with a lysis reagent
CC under conditions such that pre-rRNA is released from the cells but not
CC degraded; and (c) detecting the pre-rRNA with an oligonucleotide probe
CC capable of hybridising to a region of the pre-rRNA that is not present in
CC mature mycobacterial rRNA, where sensitivity to the antimicrobial agent
CC is indicated by an increase or decrease in pre-rRNA levels for cells
CC exposed to the antimicrobial agent compared with mycobacterial cells not
CC exposed to the antimicrobial agent. The lysis method, unlike known
CC methods, results in detectable levels of pre-rRNA

XX
XX Assay for pre-ribosomal RNA in mycobacterium cells - by hybridisation
XX with specific probes after cell lysis.
XX
XX Disclosure; Col 18; 54pp; English.
XX
XX The present sequence represents a mycobacterial mature ribosomal RNA
XX target sequence. The present invention describes a method for detecting
XX pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)
XX treating the cells to release pre-rRNA by: (i) pretreating the cells by
XX enzymatic degradation using both lysozyme and protease until their cell
XX walls are rendered porous to expose their cell membranes, making the
XX cells susceptible to lysis; (ii) contacting the pretreated cells with a
```

CC combination of a magnesium chelator, a nonionic detergent and an anionic
 CC detergent; and (iii) heating the cells to 75-99 degrees Celsius until the
 CC mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at
 CC least one oligonucleotide probe which is capable of selectively
 CC hybridizing to a region of the pre-rRNA that is not present in a mature
 CC mycobacterial rRNA. The probes can be used to identify many Mycobacterium
 CC spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,
 CC M. luteo, M. paratuberculosis, M. marinum, M. simiae and/or M.
 CC intracellular. The probes may also be used to measure mycobacterial
 CC response to inhibitors of RNA and protein synthesis and may therefore be
 CC used to screen new antimycobacterial drugs. Mycobacteria have a slow
 CC growth rate. By using the probes, drug developers can now identify
 CC compounds that are more effective, but less stable than those previously
 CC identified. (Updated on 17-OCT-2003 to standardise OS field.)

XX
XX  The present invention relates to a method for detecting Mycobacterium
XX  avium complex (MAC) organisms (eg. M. avium, M. intracellulare, M.
XX  tuberculosis, M. paratuberculosis) present in a biological sample. The
XX  method comprises amplifying a 16S ribosomal RNA (rRNA) or DNA encoding
XX  16S rRNA obtained from a biological sample containing nucleic acid from a
XX  MAC species in an in vitro nucleic acid amplification mixture comprising
XX  a polymerase activity and a pair of primers to produce an amplified
XX  nucleic acid and detecting amplified nucleic acid. The method is useful
XX  for in vitro diagnostic detection of pathogenic bacteria, particularly
XX  detecting infections caused by MAC organisms, distinguished from other
XX  closely-related Mycobacterium species. The present sequence is a probe
XX  used to detect amplified MAC 16S rRNA sequence or DNA encoding 16S rRNA

 XX The present invention relates to probes (ADF93908-ADF94059) for the
 CC specific detection and identification of harmful microorganisms in
 CC samples of foods and drug compositions. The probe sequences are derived
 CC from the V1, V2 and/or V3 regions of the 16S rRNA of the microorganism,
 CC or its complementary sequence. Detection and identification of the
 CC microorganism is by amplification of the complete 16S rRNA gene using
 CC primers ADF94060 and ADF94061, labelling the amplification product (a

CC fluorescence label is preferred), and hybridising to the probe or probes
 CC of the invention. The probes may be immobilised on a DNA chip. The
 CC microorganism is selected from Actinobacillus actinomycetocornitans,
 CC Acinetobacter calcoaceticus, Haemophilus influenzae, Stenotrophomonas
 CC maltophilia, Proteus mirabilis, Streptococcus pneumoniae, Pseudomonas

XX Determining a bacterium species comprises providing oligonucleotide
primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX Disclosure; SEQ ID NO 12; 74pp; English.

The invention relates to a method (M1) for determining a bacterium species. (M1) comprises: (a) culturing a bacterium from a specimen; (b) extracting a genomic nucleotide from the bacterium to provide a nucleotide template; (c) annealing a region of a nucleotide template to a specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion, the primer set designed to provide a product amplifying the region of the nucleotide template to produce the product; and (e) determining a species of a bacterium in a nucleotide sequence of the product. Also described is an alternative method (M2) for determining a bacterium species comprising: (a) providing a specimen or a sample having a template; (b) providing a pair of primers selected from: (i) a first forward primer having consecutive bases of an AFB-f comprising any of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments or variations and a first reverse primer having consecutive bases of an AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488) or their fragments or variations, (ii) a second forward primer having consecutive bases of an UB-f comprising any of the 28 sequences of 15-21 bp (AEA22489-AEA22516) or their fragments or variations and a second reverse primer having consecutive bases of an UB-r comprising any of the 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or variations, or (iii) a first forward primer having consecutive bases of an AFB-f of AEA22417-AEA22452 or their fragments or variations and a second reverse primer having consecutive bases of an UB-r of AEA22517-AEA22544 or their fragments or variations; (c) the specimen; and (d) comparing the product from the specimen with a nucleotide sequence from a database to determine the bacterium species present in the specimen. The methods are useful for determining a bacterium species. The present sequence represents a Mycobacterium lentiflavum 16S rRNA nucleotide

CC sequence, which is used in the exemplification of the present invention.

XX
XX Determining a bacterium species comprises providing oligonucleotide
XX primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX
PS Disclosure; SEQ ID NO 2; 74pp; English.
XX
XX The invention relates to a method (M1) for determining a bacterium
XX species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)

```

CC extracting a genomic nucleotide from the bacterium to provide a
 CC nucleotide template; (c) annealing a region of a nucleotide template to a
 CC specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
 CC complementary fashion, the primer set designed to provide a product
 CC having a predetermined size dictated by a complementary primer set; (d)
 CC amplifying the region of the nucleotide template to produce the product;
 CC and (e) determining a species of a bacterium in a nucleotide sequence of
 CC the product. Also described is an alternative method (M2) for determining
 CC a bacterium species comprising: (a) providing a specimen or a sample
 CC having a template; (b) providing a pair of primers selected from: (i) a
 CC first forward primer having consecutive bases of an AFB-f comprising any
 CC of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
 CC or variations and a first reverse primer having consecutive bases of an
 CC AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
 CC or their fragments or variations, (ii) a second forward primer having
 CC consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
 CC bp (AEA22489-AEA22516) or their fragments or variations and a second
 CC reverse primer having consecutive bases of an UB-r comprising any of the
 CC 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
 CC variations, or (iii) a first forward primer having consecutive bases of
 CC an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
 CC second reverse primer having consecutive bases of an UB-r of AEA22517-
 CC AEA22544 or their fragments or variations; (c) the specimen; and (d)
 CC comparing the product from the specimen with a nucleotide sequence from a
 CC database to determine the bacterium species present in the specimen. The
 CC methods are useful for determining a bacterium species. The present
 CC sequence represents a Mycobacterium avium 16S rRNA nucleotide sequence,
 CC which is used in the exemplification of the present invention.

XX

PT Depleting or isolating targeted nucleic acids e.g. rRNA, involves using a
 PT bridging oligonucleotide comprising bridging region and a targeting
 PT region complementary to a targeted nucleic acid, and a capture
 PT oligonucleotide.

XX Claim 4; Page 168; 209pp; English.

XX This invention relates to a novel method for isolating, depleting or
 CC separating a targeted nucleic acid, such as rRNA, from a sample
 CC comprising targeted and non-targeted nucleic acids. It effects a way of
 CC enriching for non-targeted nucleic acids such as mRNAs. Isolating
 CC sufficient quantities of high quality bacterial mRNA is a demanding
 CC process which impedes analysis of bacterial gene expression in the
 CC presence of host cells. A small percentage of bacterial mRNAs may be poly
 CC -A tailed, but these are targeted for degradation and tend to be
 CC unstable. As a result, the commonly employed method for mRNA purification
 CC with eukaryotic cells, oligo-dT capture, is ineffective. The present
 CC invention provides an alternative, more suitable method for mRNA
 CC purification from prokaryotes. The method of the invention comprises the
 CC incubation of a sample with a bridging oligonucleotide (containing a
 CC targeting region) and subsequently incubating with a capture
 CC oligonucleotide allowing the isolation of the target from the sample. The
 CC method is useful for depleting or isolating targeted nucleic acid, for
 CC example rRNA such as prokaryotic 16S or prokaryotic 23S, eukaryotic 17S
 CC or 18S or eukaryotic 28S rRNA, from a sample. The rRNA sequence may
 CC comprise any one of 64 fully defined sequences as given in the
 CC specification. The present sequence is that of a DNA sequence which
 CC represents the sequence of 16S rRNA of Mycobacterium avium related to the
 CC invention.

DR Novel microorganism strains YS-44442 and YS-45494 of Saccharothrix,
PT useful for producing pravastatin.
XX
XX Example 1; SEQ ID NO 1; 16pp; English.
XX
CC The present invention relates to the isolation of novel microorganism
CC strains of Saccharothrix designated YS-44442 and YS-45494. Also disclosed
CC is a method for isolating 3-hydroxy-3-methylglutaryl (HMG)-CoA reductase
CC inhibitors such as pravastatin. The Saccharothrix strains YS-44442 and YS
CC -45494 are useful for producing pravastatin. The method involves
CC cultivating the strains at a suitable condition to generate a
CC fermentation broth, feeding compactin into the broth, fermenting the
CC broth for a period of time to convert the compactin to pravastatin, and
CC isolating the pravastatin from the broth. The fermentation broth is
CC cultivated for less than 2 days, preferably for 18 hours. The
CC fermentation broth is derived from a seed culture of the microorganism
CC which is cultivated at a suitable condition for 18-48 hours before
CC inoculation into the broth. The broth is fermented for less than 5 days,
CC preferably 3 days, most preferably less than 24 hours. The method of the
CC invention is useful for isolating HMG-CoA reductase inhibitor. Such as
CC pravastatin, compactin or lovastatin, preferably pravastatin. The
CC pravastatin or HMG-CoA reductase inhibitors are useful for reducing blood
CC cholesterol levels. The present sequence represents Saccharothrix strain
CC YS-44442 16S rDNA sequence.

XX Novel microorganism strains YS-4442 and YS-45494 of Saccharothrix,  
XX useful for producing pravastatin.  
XX  
XX Example 1; SEQ ID NO 2; 16pp; English.  
XX  
XX The present invention relates to the isolation of novel microorganism  
XX strains of Saccharothrix designated YS-4442 and YS-45494. Also disclosed  
XX is a method for isolating 3-hydroxy-3-methylglutaryl (HMG)-CoA reductase  
XX inhibitors such as pravastatin. The Saccharothrix strains YS-4442 and YS  
XX -45494 are useful for producing pravastatin. The method involves  
XX cultivating the strains at a suitable condition to generate a  
XX fermentation broth, feeding compactin into the broth, fermenting the  
XX broth for a period of time to convert the compactin to pravastatin, and  
XX isolating the pravastatin from the broth. The fermentation broth is  
XX cultivated for less than 2 days, preferably for 18 hours. The  
XX fermentation broth is derived from a seed culture of the microorganism  
XX which is cultivated at a suitable condition for 18-48 hours before  
XX inoculation into the broth. The broth is fermented for less than 5 days,  
XX preferably 3 days, most preferably less than 24 hours. The method of the  
XX invention is useful for isolating HMG-CoA reductase inhibitor such as  
XX pravastatin, compactin or lovastatin, preferably pravastatin. The  
XX pravastatin or HMG-CoA reductase inhibitors are useful for reducing blood  
XX cholesterol levels. The present sequence represents Saccharothrix strain  
XX YS-45494 16S rDNA sequence.

XX Stereoselective synthesis of beta-amino acid such as D-beta- or L-beta-
XX phenylalanine, by contacting amino donor and amino acceptor in presence
XX of beta-amino acid transaminase to form beta-amino acid enantiomer, from
XX
XX amino acceptor.
XX
XX Claim 78; SEQ ID NO 2; 44pp; English.
XX
XX The invention relates to methods for the stereoselective synthesis and
XX for the enantiomeric enrichment of a beta-amino acid or its salt. The
XX methods involve contacting an amino donor and an amino acceptor in the
XX presence of a stereoselective beta-amino acid transaminase to form a beta
XX -amino acid enantiomer (or its salt) from the amino acceptor. The
XX invention also relates to purified stereoselective D-beta-transaminases
XX derived from a microorganism of the genera Variovorax, Nocardia,
XX Comamonas, Rhodococcus or Pseudomonas; purified stereoselective L-beta-
XX transaminases derived from a microorganism of the genus Alcaligenes;
XX methods of selecting and culturing microorganisms which express a beta-
XX transaminase; purified cultures of Variovorax paradoxus or Rhodococcus
XX opacus; the 16S ribosomal RNA gene (rDNA) of Variovorax paradoxus or
XX Rhodococcus opacus (ADW12666 and ADW12667, respectively); and a method of
XX detecting these 16S rDNA sequences. The methods of the invention are
XX useful for stereoselectively synthesizing a beta-amino acid such as D-
XX beta-phenylalanine or L-beta-phenylalanine, or for enriching one or the
XX other enantiomer in a racemic mixture. In the examples of the invention,
XX microorganisms from soil samples from two different environments were
XX screened transaminase activity on DL-beta-phenylalanine. Ribosomal DNA
XX sequencing was used to facilitate the taxonomic identification of two
XX purified microorganisms from the environmental samples. The present
XX sequence represents the specifically claimed 16S rDNA sequence which was
XX identified as originating from Rhodococcus opacus.

```

PS Claim 1; SEQ ID NO 13; 14pp; Japanese.

XX The invention relates to a novel single-stranded oligonucleotide used in

CC a detection method of an atypical mycobacteria group. The invention

CC further includes: amplifying the nucleic acid of Mycobacterium avium by a

CC loop-mediated isothermal amplification (LAMP) method; amplifying the

CC nucleic acid of M. intracellulare by a LAMP method; and a kit for detecting the

CC nucleic acid of M. kansasii by a LAMP method; and a kit for detecting the

CC nucleic acid of M. avium by a LAMP method; detecting the nucleic acid of

CC M. intracellulare by a LAMP method; or detecting the nucleic acid of M.

CC kansasii by a LAMP method. The single-stranded oligonucleotide is useful

CC in medical applications. This oligo sequence represents a loop-mediated

CC isothermal amplification (LAMP) primer used in the exemplification of the

XX invention.

 XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
 PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
 PT or for stimulating an immune response specific for a P. acnes protein.
 XX Claim 1; SEQ ID NO 35; 1481pp; English.
 XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
 CC encoding a Propionibacterium acnes protein. The invention also relates to
 CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
 CC immunogenic fragments of P. acnes polypeptides. The invention
 CC additionally encompasses expression vectors and host cells comprising a
 CC polynucleotide of the invention; antibodies against polypeptides of the
 CC invention; fusion proteins comprising a polypeptide of the invention; a
 CC method for stimulating an immune response specific for a P. acnes
 CC polypeptide and an isolated T cell population comprising T cells prepared
 CC via this method; a vaccine composition (comprising P. acnes polypeptides,
 CC polynucleotides, antibodies, fusion proteins, T cell populations, or
 CC antigen-presenting cells that express the polypeptide); a method and kit
 CC for detecting or determining the presence or absence of P. acnes in a
 CC patient; and a method for inhibiting the development of P. acnes in a
 CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
 CC proteins, T cell populations or antigen-presenting cells that express the
 CC polypeptides are useful for diagnosing, preventing or treating acne
 CC vulgaris, or for stimulating an immune response specific for a P. acnes
 CC protein. The polynucleotides can also be used as probes or primers for
 CC nucleic acid hybridisation. The vaccine composition is useful for the
 CC stimulation of an immune response against P. acnes, or for treating acne,
 CC and the kit is useful for performing a diagnostic assay. The present
 CC sequence represents a P. acnes DNA config which is specifically claimed
 CC in the invention. Note: The sequence data for this patent did not form
 CC part of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX Mycobacterial sensitivity and drug screening assays - involving release
XX of pre-rRNA by lysis.
XX
XX Example 4; Col 17-18; 50pp; English.
XX
XX This sequence represents a target sequence for mycobacterial probes. This
XX sequence represents a precursor RNA fragment that is released during the
XX method of the invention. The method is for the determination of
XX mycobacterial cell sensitivity to an antimicrobial agent, and comprises:
XX (a) culturing the cells in the presence of the antimicrobial agent; (b)
XX treating the cells by enzymatic or mechanical means to expose the cell
XX membrane to lysis reagents, and contacting the cells with a lysis reagent
XX under conditions such that pre-rRNA is released from the cells but not
XX degraded; and (c) detecting the pre-rRNA with an oligonucleotide probe
XX capable of hybridising to a region of the pre-rRNA that is not present in
XX mature mycobacterial rRNA, where sensitivity to the antimicrobial agent
XX is indicated by an increase or decrease in pre-rRNA levels for cells
XX exposed to the antimicrobial agent compared with mycobacterial cells not
XX exposed to the antimicrobial agent. The lysis method, unlike known
XX methods, results in detectable levels of pre-rRNA

 XX
 CC The present sequence represents a mycobacterial mature ribosomal RNA
 CC target sequence. The present invention describes a method for detecting
 CC pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)
 CC treating the cells to release pre-rRNA by: (i) pretreating the cells by
 CC enzymatic degradation using both lysozyme and protease until their cell
 CC walls are rendered porous to expose their cell membranes, making the
 CC cells susceptible to lysis; (ii) contacting the pretreated cells with a
 CC combination of a magnesium chelator, a nonionic detergent and an anionic
 CC detergent; and (iii) heating the cells to 75-99 degrees Celsius until the
 CC mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at
 CC least one oligonucleotide probe which is capable of selectively
 CC hybridizing to a region of the pre-rRNA that is not present in a mature
 CC mycobacterial RNA. The probes can be used to identify many Mycobacterium
 CC spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,
 CC M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.
 CC intracellulare. The probes may also be used to measure mycobacterial
 CC response to inhibitors of RNA and protein synthesis and may therefore be
 CC used to screen new antimycobacterial drugs. Mycobacteria have a slow
 CC growth rate. By using the probes, drug developers can now identify
 CC compounds that are more effective, but less stable than those previously
 CC identified

 CC The invention describes a new method for diagnosis, identification and
 CC characterisation of Mycobacterium tuberculosis or any other mycobacteria

CC by using polymerase chain reaction (PCR) and shift mobility assay (SMA)
 CC in urea-polyacrylamide gel (UPAGE) comprises culturing, DNA extraction,
 CC DNA amplification and Shift mobility assay. The method is based on
 CC divergence in sequences found in 16S rRNA to identify mycobacteria
 CC species, since a remarkable shift of heteroduplex bands are obtained
 CC between single stranded and homoduplex bands in UPAGE. The method is
 CC fast, simple and can produce information not easily obtained when
 CC compared with other detection methods. The sensitivity of other assays
 CC suffer due to the tendency of the denatured PCR product strands to
 CC reassociate and exclude oligonucleotide probes, and steric interference
 CC between the bound oligonucleotides and the solid support which impede
 CC hybridization to nucleic acids in solution. Sequences AAX99193-237
 CC represent 16S rRNA gene regions of some mycobacterial species

XX Identifying at least one gene involved in plant resistance or response to
 PT pathogenic infection for conferring resistance or tolerance to a plant to
 PT bacterial, fungal or viral infection by determining or detecting plant
 PT gene expression.

XX Claim 6; SEQ ID NO 2034; 899pp; English.

XX The present invention relates to a method (M1) for identifying genes
 CC involved in plant resistance or response to pathogenic infection. M1
 CC comprises identifying a gene whose expression is significantly altered in
 CC the incompatible interaction of plant gene expression relative to
 CC expression of the gene in an uninfected plant, in a mutant plant that
 CC does not express a gene associated with response to pathogenic infection,
 CC or in a corresponding incompatible or compatible interaction. (M1) is
 CC useful for conferring resistance to resistance or tolerance to a plant to
 CC bacterial, fungal or viral infection. The present or tolerance was used to
 CC illustrate the invention.

XX Improving plant productivity comprises introducing into the plant or
 PT propagation material an endophytic actinomycete that facilitates
 PT induction of at least one characteristic related to improved
 PT productivity.

XX Claim 1; SEQ ID NO 1; 235pp; English.

XX This invention relates to a novel method for improving plant
 CC productivity. Specifically, it refers to introducing into the plant or
 CC propagation material an endophytic actinomycetes or variant thereof,
 CC where the actinomycetes facilitate induction of a characteristic related
 CC to improved productivity. The present invention further describes
 CC metabolites of the actinomycetes microorganism such as auxin, gibberellin
 CC or cytokinin that are able to induce disease resistance in plants i.e.
 CC provide disease bio-control capabilities against pathogen infection.
 CC Accordingly, the method facilitates the improvement of cereal crop
 CC productivity including increasing germination by up-regulating plant
 CC growth promoting activities, as well as improving plant vigor or flower
 CC and fruit yield. Furthermore, the new actinomycete or metabolite is
 CC useful in the manufacture of a medicament for the therapeutic and/or
 CC prophylactic treatment of a mammalian or non-mammalian subject i.e.
 CC plant. As such, this method provides plant protectants and plant growth
 CC stimulants that exhibit antibacterial, antimicrobial, fungicide,
 CC insecticide and nematocide activities. This polynucleotide is the DNA
 CC sequence of an actinomycetes 16S ribosomal RNA sequence of the invention.

XX Obtaining sequence information from target biomolecule, by fragmenting

PT target biomolecule by partial cleavage, performing mass spectrometry,
 PT extracting information from mass spectra, constructing sequencing graph
 PT and traversing graphs.

XX Disclosure; SEQ ID NO 11; 133pp; English.

XX This invention describes a novel method for obtaining sequence
 CC information from a target biomolecule and involves fragmenting the target
 CC biomolecule into several fragments by partial cleavage, performing mass
 CC spectrometry on fragments to produce mass spectra, extracting peak
 CC information from the produced mass spectra, constructing sequencing graph
 CC using the extracted peak information and traversing the sequencing graphs
 CC to reconstruct sequence information of the target biomolecule. The target
 CC biomolecule is nucleic acid molecule such as DNA or RNA, or is a protein
 CC and the compositions of the two fragments are the base compositions or
 CC amino acid compositions. This method preferably involves subjecting the
 CC nucleic acid molecule to partial cleavage reactions with one or more
 CC specific cleavage reagents, thus generating two or more fragments that
 CC are specific cleavage products, determining the molecular weights of the
 CC two or more fragments, determining the possible base compositions of the
 CC two or more fragments, ordering the possible base compositions of the two
 CC or more fragments according to the number of specific cleavage sites that
 CC are not cleaved in each fragment, constructing one or more sequencing
 CC graphs that are a graph theoretical representation of the ordered base
 CC compositions for the two or more fragments, and traversing the one or
 CC more sequencing graph to reconstruct one or more underlying sequence
 CC candidates, where each sequencing graph corresponds to the ordered base
 CC compositions derived from a partial cleavage reaction with one base-
 CC specific cleavage reagent. This method further involves scoring the one
 CC or more underlying sequence candidates and determining the rank order of
 CC fitness, where the scoring is done by statistical analysis or maximum
 CC likelihood statistical analysis. This method determines epigenetic
 CC changes in a target nucleic acid molecule relative to reference nucleic
 CC acid molecule and allows the sequencing of large biomolecules. The
 CC invention also describes a method of producing a candidate sequence of a
 CC biomolecule which involves receiving several sequencing graphs having
 CC several vertices and edges, where each vertex represents a compomer of
 CC the biomolecule and each edge represents a cut base of the sequencing
 CC graph and generating the candidate sequence by traversing several
 CC sequencing graphs. This second method further involves traversing several
 CC sequencing graphs by tracing through each sequencing graph, starting at a
 CC source vertex. The results of each method can be read by a program
 CC product for use in a computer that executes program instructions recorded
 CC in a computer-readable media to produce a candidate sequence of a
 CC biomolecule or to obtain sequence information in a target biomolecule.
 CC The target biomolecule contains a sequence variation, which is a mutation
 CC or a polymorphism. The target is a target nucleic acid molecule from an
 CC organism chosen from eukaryotes, prokaryotes and viruses, preferably a
 CC bacterium. The specific cleavage reagent is an RNase chosen from RNase
 CC T1, RNase U2, RNase Phym, RNase A, chicken liver RNase (RNase CL3) and
 CC cusavitin, or a glycosylase. The sequence variations in the target
 CC biomolecule permit genotyping a subject, forensic analysis, disease
 CC diagnosis or disease prognosis. The novel methods are useful for de novo
 CC sequencing, to identify genetic disease or chromosome abnormality,
 CC identifying a predisposition to a disease, or condition including an
 CC obesity, atherosclerosis, or cancer, to identify an infection by an
 CC infectious agent, to identify a pathogen, determine haplotypes, analyze
 CC microsatellite sequences, and short tandem repeat (STR) loci, determine
 CC allelic variation and/or frequency, and analyze cellular methylation
 CC patterns. This sequence represents an amplicon used to illustrate the
 CC sequencing technique described in the invention.

PS
XX
XX The invention relates to a novel stabilising reaction reagent for use in
CC the amplification and/or detection of a target nucleic acid comprising:
CC preparing a reaction mixture with e.g. a nucleic acid as template, at
CC least 1 primer and RNaseH; and incubation of the reaction mixture for a
CC defined period of time to form a reaction product during the
CC amplification of such target nucleic acid. The method is useful for
CC stabilising and long-term storage of reaction reagents for highly
CC sensitive and specific amplification and detection of nucleic acids
CC particularly in identifying pathogenic microorganisms or viruses in a
CC sample using chimeric oligonucleotide primers, which is useful in genetic
CC engineering and clinical medicine. This polynucleotide sequence
CC represents an oligo relating to the novel stabilising reaction reagent
CC method of the invention

Polynucleotide library used to determine cancerous states of mammalian
cells.
XX
Claim 1; Page 892; 1097pp; English.
XX
AAA00010 to AAA02716 represent polynucleotides isolated from cDNA
libraries constructed from human colon cancer cell lines. The present
invention also describes a method of detecting differentially expressed
genes correlated with a cancerous state of a mammalian cell, comprising
detecting at least one differentially expressed gene product in a test
sample derived from a cell suspected of being cancerous, where detection
of the differentially expressed gene product is correlated with a
cancerous state of the cell from which the test sample was derived. The
polynucleotides sequences can be used in a method for detecting
differentially expressed genes correlated with a cancerous state of a
mammalian cell. The polynucleotides can also be used as probes for
detecting and mapping related genes. They can be used in diagnosis and
prognosis of diseases and disorders (e.g. identification of pre-
metastatic or metastatic cancerous states, stages of cancer, or
responsiveness of cancer to therapy). This is particularly for breast
cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-
negative breast cancer, lung cancer, and colon cancer

PT Determining a bacterium species comprises providing oligonucleotide
PT primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX
XX Disclosure; SEQ ID NO 11; 74pp; English.
XX
The invention relates to a method (M1) for determining a bacterium
species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
extracting a genomic nucleotide from the bacterium to provide a
nucleotide template; (c) annealing a region of a nucleotide template to a
specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
complimentary fashion, the primer set designed to provide a product
having a predetermined size dictated by a complementary primer set; (d)
amplifying the region of the nucleotide template to produce the product;
and (e) determining a species of a bacterium in a nucleotide sequence of
the product. Also described is an alternative method (M2) for determining
a bacterium species comprising: (a) providing a specimen or a sample
having a template; (b) providing a pair of primers selected from: (i) a
first forward primer having consecutive bases of an AFB-f comprising any
of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
or variations and a first reverse primer having consecutive bases of an
AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
or their fragments or variations, (ii) a second forward primer having
consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
bp (AEA22489-AEA22516) or their fragments or variations and a second
reverse primer having consecutive bases of an UB-r comprising any of the
28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
variations, or (iii) a first forward primer having consecutive bases of
an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
second reverse primer having consecutive bases of an UB-r of AEA22517-
AEA22544 or their fragments or variations; (c) the specimen; and (d)
comparing the product from the specimen with a nucleotide sequence from a
database to determine the bacterium species present in the specimen. The
methods are useful for determining a bacterium species. The present
invention represents a Mycobacterium kubicae 16S rRNA nucleotide sequence,
which is used in the exemplification of the present invention.

 PT in raising ayu fish, flatfish, blowfish and gold fish, has ammonia
 PT utilizing ability and nitrous acid oxidation ability.

XX PS Disclosure; SEQ ID NO 1; 16pp; Japanese.

XX CC This invention relates to a novel Gordonia genus Actinomyces which has

CC ammonia utilizing ability and nitrous acid oxidation ability. The
 CC invention may be useful for purifying fresh water and seawater, of
 CC particular use in raising ayu fish, flatfish, blowfish and gold fish. The
 CC Gordonia genus actinomyces effectively suppresses concentration of
 CC ammonia and nitrous acid in fresh water and seawater, and provides
 CC purified water that is favourable for raising fishes.

XX
XX Detecting Mycobacterium species, involves in vitro amplification of 16S
XX rRNA or DNA encoding RNA in nucleic acid amplification mixture using
XX specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 35; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX them. The method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a PCR primer used for
XX amplifying Mycobacterium 16S rRNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

UI-M-DJ2 is a subcloned cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is: GCTACATGAT, subfornical
organ and area postrema."

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
5 kb were prepared and both extremities were sequenced. See
keywords for description of this sequence and for the sequence of
the other extremity of this insert.

                Seeds were surface sterilized then germinated under axenic
                conditions in the dark at room temperature on filter paper
                with water, nystatin and cefotaxime in covered
                crystallization dishes. Five-day old seedlings were
                incubated at 50C for 2 days. Shoots were then harvested,
                total RNA was prepared, poly(A) RNA was purified, one
                primary unamplified cDNA library was made, and 600000 pfu
                were in vivo excised to give pBluescript SK(-) cDNA
                phagemids. These steps were performed in the TJ Close
                laboratory at the University of California, Riverside
                (Choi, Close, Fenton). Phagemids were plated and picked at
                the Clemson University Genomics Institute (CUGI) (Begum,
                Palmer, Frisch, Atkins and Wing). Plasmid DNA
                preparations, DNA sequencing and sequence analysis were
                performed at CUGI (Wing, Yu, Frisch, Henry, Simmons,
                Oates, Rambo, Main). The sequence has been trimmed to
                remove vector sequence and contains a minimum of 100 bases
                of phred value 20 or above. For more details on library
                preparation and sequence analysis see
                http://www.genome.clemson.edu/projects/barley. To order
                this clone see http://www.genome.clemson.edu/orders Also

Seeds were surface sterilized then germinated under axenic
conditions in the dark at room temperature on filter paper
with water, nystatin and cefotaxime in covered
crystallization dishes. Five-day old seedlings were
incubated at 50C for 2 days. Shoots were then harvested,
total RNA was prepared, poly(A) RNA was purified, one
primary unamplified cDNA library was made, and 60000 pfu
were in vivo excised to give pBluescript SK(-) cDNA
phagemids. These steps were performed in the TJ Close
laboratory at the University of California, Riverside
(Choi, Close, Fenton). Phagemids were plated and picked at
the Clemson University Genomics Institute (CUGI) (Begum,
Palmer, Frisch, Atkins and Wing). Plasmid DNA
preparations, DNA sequencing and sequence analysis were
performed at CUGI (Wing, Yu, Frisch, Henry, Simmons,
Oates, Rambo, Main). The sequence has been trimmed to
remove vector sequence and contains a minimum of 100 bases
of phred value 20 or above. For more details on library
preparation and sequence analysis see

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998). This clone is in a
modified pBluescript vector as a SstI/XhoI insert. Please visit our
web site (http://www.gsc.riken.go.jp/e/plant/index\_e.html) for
further details.

CW966724/C
LOCUS CW966724 569 bp DNA linear GSS 21-DEC-2004
DEFINITION ATAA-aab25f11.g1 Ancylostoma caninum whole genome shotgun library
(AIAGSS 001) Ancylostoma caninum genomic, genomic survey sequence.
ACCESSION CW966724
VERSION CW966724.1 GI:56767451
KEYWORDS GSS.
SOURCE Ancylostoma caninum (dog hookworm)
ORGANISM Ancylostoma caninum
Eukaryota; Metazoa; Nematoda; Chromadorea; Rhabditida; Strongylida;
Ancylostomatoidae; Ancylostomatidae; Ancylostomatinae; Ancylostoma.
REFERENCE 1 (bases 1 to 569)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Detecting Mycobacterium species, involves in vitro amplification of 16S
PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using
PT specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 36; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species.
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX them. The method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a PCR primer used for
XX amplifying Mycobacterium 16S rRNA

PT Detecting Mycobacterium species, involves in vitro amplification of 16S
PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using
PT specific primers, and detecting the amplified nucleic acid.
XX
SQ Claim 1; Page 36; 44pp; English.
XX
CC The invention relates to a method of detecting Mycobacterium species,
CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture
CC comprising a polymerase, and at least two primers, and then detecting the
CC amplified nucleic acid. The method is relatively simple and useful for
CC detecting the presence of various Mycobacterium species in a biological
CC sample, and thus important for diagnosis of infections resulting from
CC them. The method is especially important for screening opportunistic
CC infections caused by M. tuberculosis or a Mycobacterium other than
CC tuberculosis (MOTT). The present sequence is a PCR primer used for
CC amplifying Mycobacterium 16S rRNA

CC      The invention relates to a novel method for decomposing formaldehyde by
CC      using microbial cells that belong to Mycobacterium sp. or Fusarium
CC      oxysporum, and/or the growth medium of the microbial cells. The invention
CC      further comprises: microbial cells which belong to Mycobacterium sp.
CC      having the ability to decompose formaldehyde; a formaldehyde
CC      decomposition agent comprising Mycobacterium sp. and/or the growth medium
CC      of the microbial cells; and a formaldehyde decomposition agent comprising
CC      F. oxysporum and/or its growth medium. The method is useful for
CC      decomposing formaldehyde in sea water by Mycobacterium sp. or F.
CC      oxysporum that is deposited under FERM P-S18690 or FERM P-18483,
CC      respectively. This polynucleotide sequence represents the Mycobacterium
CC      sp. DNA of the invention.

Determining a bacterium species comprises providing oligonucleotide
primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
Disclosure; SEQ ID NO 6; 74pp; English.
The invention relates to a method (M1) for determining a bacterium
species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
extracting a genomic nucleotide from the bacterium to provide a
nucleotide template; (c) annealing a region of a nucleotide template to a
specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
complimentary fashion, the primer set designed to provide a product
having a predetermined size dictated by a complimentary primer set; (d)
amplifying the region of the nucleotide template to produce the product;
and (e) determining a species of a bacterium in a nucleotide sequence of
the product. Also described is an alternative method (M2) for determining
a bacterium species comprising: (a) providing a specimen or a sample
having a template; (b) providing a pair of primers selected from: (i) a
first forward primer having consecutive bases of an AFB-f comprising any
of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
or variations and a first reverse primer having consecutive bases of an
AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
or their fragments or variations, (ii) a second forward primer having
consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
bp (AEA22489-AEA22516) or their fragments or variations and a second
reverse primer having consecutive bases of an UB-r comprising any of the
28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
variations, or (iii) a first forward primer having consecutive bases of
an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
second reverse primer having consecutive bases of an UB-r of AEA22517-
AEA22544 or their fragments or variations; (c) the specimen; and (d)
comparing the product from the specimen with a nucleotide sequence from a
database to determine the bacterium species present in the specimen. The
methods are useful for determining a bacterium species. The present
sequence represents a Mycobacterium fortuitum 16S rRNA nucleotide
sequence, which is used in the exemplification of the present invention.

 PT primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
 XX Disclosure; SEQ ID NO 5; 74pp; English.
 XX The invention relates to a method (M1) for determining a bacterium
 CC species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
 CC extracting a genomic nucleotide from the bacterium to provide a
 CC nucleotide template; (c) annealing a region of a nucleotide template to a
 CC specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
 CC complimentary fashion, the primer set designed to provide a product
 CC having a predetermined size dictated by a complimentary primer set; (d)
 CC amplifying the region of the nucleotide template to produce the product;
 CC and (e) determining a species of a bacterium in a nucleotide sequence of
 CC the product. Also described is an alternative method (M2) for determining
 CC a bacterium species comprising: (a) providing a specimen or a sample
 CC having a template; (b) providing a pair of primers selected from: (i) a
 CC first forward primer having consecutive bases of an APB-f comprising any
 CC of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
 CC or variations, and a first reverse primer having consecutive bases of an
 CC reverse primer having consecutive bases of an APB-f comprising any of the
 CC 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
 CC variations, or (iii) a first forward primer having consecutive bases of
 CC an APB-f of AEA22417-AEA22452 or their fragments or variations and a
 CC second reverse primer having consecutive bases of an APB-f of AEA22517-
 CC AEA22544 or their fragments or variations; (c) the specimen; and (d)
 CC comparing the product from the specimen with a nucleotide sequence from a
 CC database to determine the bacterium species present in the specimen. The
 CC methods are useful for determining a bacterium species. The present
 CC sequence represents a Mycobacterium farcinogenes 16S rRNA nucleotide
 CC sequence, which is used in the exemplification of the present invention.

 XX PS The present invention relates to novel cell growth, differentiation and
 XX death (CGDD) proteins and polynucleotides encoding them. The sequences of
 XX the invention are useful in diagnosing, preventing and treating disorders
 XX associated with an abnormal expression or activity of CGDD such as
 XX neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's
 XX disease), muscular disorders (e.g. myotonic dystrophy, catatonias),
 XX endocrine disorders (e.g. diabetes, Grave's disease), cancers (e.g.
 XX leukaemia, cervical or breast cancer), immunological disorders (e.g.
 XX scleroderma, systemic lupus erythematosus, allergies), gastrointestinal
 XX disorders (e.g. Crohn's disease), renal disorders (e.g. Goodpasture's
 XX syndrome), infections (e.g. viral, bacterial, fungal, parasitic,
 XX protozoal, helminthic), cardiovascular disorders (e.g. atherosclerosis)
 XX and hepatic diseases (e.g. cirrhosis). The polynucleotides can be used to
 XX create humanised animals or transgenic animals to model human diseases.
 XX The invention is also used in gene therapy. The present sequence is human

XX      Assay for pre-ribosomal RNA in mycobacterium cells - by hybridisation
PT      with specific probes after cell lysis.
XX      PS Disclosure; Col 18; 54pp; English.
XX      The present sequence represents a mycobacterial mature ribosomal RNA
CC      target sequence. The present invention describes a method for detecting
CC      pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)
CC      treating the cells to release pre-rRNA by: (i) pretreating the cells by
CC      enzymatic degradation using both lysozyme and protease until their cell
CC      walls are rendered porous to expose their cell membranes, making the
CC      cells susceptible to lysis; (ii) contacting the pretreated cells with a
CC      combination of a magnesium chelator, a nonionic detergent and an anionic
CC      detergent; and (iii) heating the cells to 75-99 degrees Celsius until the
CC      mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at
CC      least one oligonucleotide probe which is capable of selectively
CC      hybridizing to a region of the pre-rRNA that is not present in a mature
CC      mycobacterial rRNA. The probes can be used to identify many Mycobacterium
CC      spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,
CC      M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.
CC      intracellulare. The probes may also be used to measure mycobacterial
CC      response to inhibitors of RNA and protein synthesis and may therefore be
CC      used to screen new antimycobacterial drugs. Mycobacteria have a slow
CC      growth rate. By using the probes, drug developers can now identify
CC      compounds that are more effective, but less stable than those previously
CC      identified

XX Polynucleotide library used to determine cancerous states of mammalian
PT cells.
PT
PT
PS Claim 1; Page 892; 1097pp; English.
XX
XX AAA00010 to AAA02716 represent polynucleotides isolated from cDNA
CC libraries constructed from human colon cancer cell lines. The present
CC invention also describes a method of detecting differentially expressed
CC genes correlated with a cancerous state of a mammalian cell, comprising
CC detecting at least one differentially expressed gene product in a test
CC sample derived from a cell suspected of being cancerous, where detection
CC of the differentially expressed gene product is correlated with a
CC cancerous state of the cell from which the test sample was derived. The
CC polynucleotide sequences can be used in a method for detecting
CC differentially expressed genes correlated with a cancerous state of a
CC mammalian cell. The polynucleotides can also be used as probes for
CC detecting and mapping related genes. They can be used in diagnosis and
CC prognosis of diseases and disorders (e.g. identification of pre-
CC metastatic or metastatic cancerous states, stages of cancer, or
CC responsiveness of cancer to therapy). This is particularly for breast
CC cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-
CC negative breast cancer, lung cancer, and colon cancer

PS Claim 2; SEQ ID NO 150; 150pp; Japanese.
XX
XX The present invention relates to probes (ADF93908-ADF94059) for the
CC specific detection and identification of harmful microorganisms in
CC samples of foods and drug compositions. The probe sequences are derived
CC from the V1, V2 and/or V3 regions of the 16S rRNA of the microorganism,
CC or its complementary sequence. Detection and identification of the
CC microorganism is by amplification of the complete 16S rRNA gene using
CC primers ADF94060 and ADF94061, labelling the amplification product (a
CC fluorescence label is preferred), and hybridising to the probe or probes
CC of the invention. The probes may be immobilised on a DNA chip. The
CC microorganism is selected from Actinobacillus actinomycetemcomitans,
CC Acinetobacter calcoaceticus, Haemophilus influenzae, Stenotrophomonas
CC maltophilia, Proteus mirabilis, Streptococcus pneumoniae, Pseudomonas
CC aeruginosa, Citrobacter freundii, Veillonella parvula, Providencia
CC stuartii, Neisseria gonorrhoeae, Streptococcus agalactiae, Morganella
CC morganii, Bacteroides fragilis, Staphylococcus hominis, Staphylococcus

PT New probes used for detection of maduromycetes bacteria and to
PT differentiate between maduromycetes and streptomycetes.

PS Disclosure; Fig 1; 22pp; English.

The invention relates to a novel nucleic acid probe hybridises to a nucleic acid encoding a portion of 16S rRNA of maduromyces bacteria under hybridisation conditions, and does not hybridise to nucleic acids encoding a portion of 16S rRNA of streptomycetes under identical hybridisation conditions. The probes can be used for detecting the presence of maduromyces bacteria in a sample and for differentiating between maduromyces and streptomycetes bacteria in a sample. The present sequence represents a preferred probe of the invention

XX
CC The present invention describes a DNA sequence which contains a base
CC sequence from bases 544-1758 in the sequence of (I) with 1992 base pairs,
CC or a DNA hybridisable with the DNA under stringent conditions and
CC encoding a polypeptide with hydroxylase activity on compactin at 6beta-
CC position. Also described: (1) DNA containing base sequences from bases
CC 544-1758 and from bases 1782-1970 in the sequence of (I) or a DNA
CC hybridisable with the DNA under stringent conditions and encoding a
CC polypeptide with hydroxylase activity on compactin at the 6beta-position;
CC (2) a polypeptide encoded by any of the DNA or containing an amino acid
CC sequence based on the polypeptide but with some amino acids deleted,
CC substituted or added and having hydroxylase activity on compactin at the
CC 6beta-position; (3) a recombinant DNA obtained by integrating with any of
CC the DNA; (4) a microorganism transferred with the recombinant DNA; (5) a
CC process for producing pravastatin by culturing the transformant
CC microorganism before isolating the culture liquor or cells, and addition
CC of compactin for reaction to give pravastatin for recovery; and (6)
CC Streptomyces sp. TW-6 (FERM BP-8002) or TW-7 (FERM BP-8003). (I) has
CC antilipaemic activity. The polypeptide and its encoded DNA are applicable
CC in constructing transformant microorganisms to synthesise pravastatin for
CC treating hyperlipidaemia. With the recombinant microorganisms,
CC pravastatin can be produced efficiently, with much less galpha
CC hydroxylated epimer formed. The present sequence represents a
CC Microtetraspora recticatena IFO14525 nucleotide sequence, which is given
CC in the exemplification of the present invention

XX PT Improving plant productivity comprises introducing into the plant or
 PT propagation material an endophytic actinomycete that facilitates
 PT induction of at least one characteristic related to improved
 PT productivity.

XX PS Example 18; Fig 19; 235pp; English.

XX CC This invention relates to a novel method for improving plant
 CC productivity. Specifically, it refers to introducing into the plant or
 CC propagation material an endophytic actinomycetes or variant thereof,
 CC where the actinomycetes facilitate induction of a characteristic related
 CC to improved productivity. The present invention further describes
 CC metabolites of the actinomycetes microorganism such as auxin, gibberellin
 CC or cytokinin that are able to induce disease resistance in plants i.e.
 CC provide disease bio-control capabilities against pathogen infection.
 CC Accordingly, the method facilitates the improvement of cereal crop
 CC productivity including increasing germination by up-regulating plant
 CC growth promoting activities, as well as improving plant vigor or flower
 CC and fruit yield. Furthermore, the new actinomycete or metabolite is
 CC useful in the manufacture of a medicament for the therapeutic and/or
 CC prophylactic treatment of a mammalian or non-mammalian subject i.e.
 CC plant. As such, this method provides plant protectants and plant growth
 CC stimulants that exhibit antibacterial, antimicrobial, fungicide,
 CC insecticide and nematocide activities. This polynucleotide is the DNA
 CC sequence of an actinomycetes 16S ribosomal RNA sequence of the invention.

XX PT Novel nucleic acid fragment useful for converting ketone substrates to
 PT the corresponding lactone or ester, is isolated from Rhodococcus,
 PT Arthrobacter or Acidovorax, encoding Baeyer-Villiger monooxygenase
 PT polypeptide.

XX PS Claim 54; SEQ ID NO 6; 225pp; English.

XX CC The invention relates to a novel isolated nucleic acid fragment
 CC comprising a fragment encoding a Baeyer-Villiger (BV) monooxygenase
 CC polypeptide having a sequence of 542, 541, 439, 518, 462, 523, 493, 539,
 CC 649, 494, 499, 545, 532 or 538 amino acids defined in the specification;
 CC a nucleic acid molecule that hybridises with the above sequence under the
 CC hybridisation conditions; or their complements. The BV monooxygenase
 CC fragment is useful for obtaining a nucleic acid fragment encoding a BV
 CC monooxygenase polypeptide, by probing a genomic library with the
 CC fragment, identifying a DNA clone that hybridises with the fragment, and
 CC sequencing the genomic fragment that comprises the above identified
 CC clone, where the sequenced genomic fragment encodes a BV monooxygenase
 CC polypeptide. The genes and their products are useful for converting
 CC suitable ketone substrates to the corresponding lactone or ester. This
 CC polynucleotide sequence represents the 16S rDNA gene from Arthrobacter
 CC sp. BP2 relating to the Baeyer-Villiger enzymes of the invention.

New abyssomicin polycyclic macrolactone compounds, useful as antibiotics
and antiprotozoal agents effective against multiresistant strains,
PT prepared using bacteria of genus Verrucosisspora.
PS Disclosure; SEQ ID NO 1; 47pp; German.
This invention describes novel polycyclic macrolactones and their
derivatives , prepared using bacteria of genus Verrucosisspora and
designated abyssomicins. The polycyclic macrolactones have at least one
oxa-bicyclo system as a partial structure and at least one Michael system
as double bond system. The polycyclic macrolactones are prepared by
culturing Verrucosisspora strain AB 18-032, recovering a culture
supernatant from the culture, optionally preparing a culture filtrate and
optionally isolating one or more polycyclic macrolactones from the
supernatant and/or filtrate. Alternatively the microorganism is cultured
followed by isolating one or more polycyclic macrolactones from the
microorganism. The Verrucosisspora strain AB 18-032 was isolated from
marine sediment collected at a depth of 1000m in Sagami bay in the
Japanese Sea and is deposited as DSM No. 15899. The polycyclic
macrolactones inhibit the biosynthesis of p-Aminobenzoic acid, (an
essential component in the biosynthesis of folic acid) from chorismic
acid, thus inhibiting folic acid biosynthesis. The vitamin folic acid is
essential to the life of microorganisms, especially prokaryotes and
protozoa. The polycyclic macrolactones do not inhibit the biosynthesis of
folic acid in mammals (including humans), and thus have no adverse
effects on mammalian cells. Three polycyclic macrolactones are
specifically claimed, i.e. abyssomicin B, abyssomicin C and abyssomicin
D. Abyssomicin C strongly inhibited growth of methicillin-resistant
CC Staphylococcus aureus strain N315 and vancomycin-resistant Staphylococcus
CC aureus strain Mu50. The products of the invention are useful as
CC antibiotics (especially effective against Gram positive bacteria) and
CC antiprotozoal agents, specifically effective against bacteria and
CC protozoa resistant (especially multi-resistant) to conventional
CC antibiotics. Typically polycyclic macrolactones are useful for combating
CC tropical protozoal diseases (e.g. malaria, leishmaniasis, sleeping
CC sickness and Chagas disease) and infections caused by resistant Gram
CC positive bacteria such as methicillin- and vancomycin-resistant
CC Staphylococcus aureus strains. Polycyclic macrolactones are also useful
CC as disinfectants (especially in hospitals and other medical
CC establishments) and as lead structures for the development of further
CC active agents. This sequence represents the Verrucosisspora strain AB 18-
CC 032 16S rRNA DNA which is used to phylogenically classify the bacterial
CC strain.

Evaluating the ability of an environmental sample to degrade alkanes for
PT providing alkane degrading bacteria, comprises measuring alkane degrading
PT bacteria having high resolving power of alkane present in petroleum.
PS Claim 1; SEQ ID NO 3; 33pp; Japanese.
XX
CC The invention relates to a novel method for evaluating the ability of an
CC environmental sample to degrade alkanes. The method comprises measuring
CC the number of alkane-degrading bacteria present in the sample, where the
CC bacteria have high resolving power of a type of alkane present in
CC petroleum and gyrB (gyrase beta subunit) DNA and 16S rDNA. The method of
CC the invention may be useful for evaluating the ability of an
CC environmental sample to degrade alkanes and thus, for providing alkane-
CC degrading bacteria to be utilised in bioremediation of an environment
CC contaminated with petroleum. The method is rapid and simple. The current
CC sequence is that of the Rhodococcus sp. M-15 bioremediation-related 16S
CC ribosomal RNA gene (rDNA) of the invention.

XX Novel Rhodococcus erythropolis M-13 strain capable of degrading aliphatic

PT hydrocarbon, useful for bioremediation of oil-polluted environment such

PT as river water, underground water, ocean, sea coast.

PS Claim 1; SEQ ID NO 1; 14pp; Japanese.

XX The invention relates to a novel Rhodococcus erythropolis M-13 strain

CC capable of degrading aliphatic hydrocarbons. The invention further

CC provides the 16S rRNA gene of the novel strain showing 98% or more

CC homology with a nucleotide sequence of a fully defined 1511 nucleotide

CC (AED11327) sequence given in specification. The novel strain is useful

CC for the bioremediation of an oil-polluted environment, such as river

CC water, underground water, ocean, sea coast, etc. The novel strain degrades

CC linear or branched aliphatic hydrocarbons efficiently. This

CC polynucleotide sequence represents the DNA of the novel Rhodococcus

CC erythropolis M-13 strain 16S rRNA gene of the invention.

PT Novel antibiotics isolated from fermentation broth of novel strain of

PT Microbispora corallina, useful for treating a wide range of bacterial

PT infections.

XX

PS Disclosure; SEQ ID NO 1; 20pp; English.

XX

CC The invention relates to antibiotic MF-BA-1768alpal or MF-BA-1768-betal

CC or its pharmaceutically acceptable salt, having physicochemical

CC characteristics in the non-salt form as detailed in the specification.

CC The antibiotics are isolated from a novel strain of Microbispora

CC corallina designated NRRL 30420. Also included are producing the above

CC antibiotic (by cultivating Microbispora corallina NRRL 30420, or an

CC antibiotic MF- BA-1768alpal or MF-BA-1768betal -producing mutant,

CC variant or its recombinant form, in a culture medium containing

CC assimilable sources of carbon, nitrogen and inorganic salts under aerobic

CC fermentation conditions until the antibiotic is produced and then

CC recovering the antibiotic) and a composition comprising the above

CC antibiotic or its salt. The antibiotics are useful for treating a

CC bacterial infection caused by Staphylococcus (e.g. S.aureus , S.epidermis

CC , S.haemolyticus), Enterococcus (e.g. E.faecalis , E.faecium),

CC Streptococcus (e.g. S.pneumoniae , S.pyrogenes), Haemophilus (e.g.

CC H.influenzae) or Escherichia (e.g. E.coli) in a patient. The present

CC sequence is partial 16S rRNA sequence from M. corallina NRRL 30420, which

CC identifies the strain.

PS Claim 1; SEQ ID NO 44; 149pp; English.

XX

CC The present invention relates to genes and proteins associated with

CC vasculogenesis and angiogenesis related disorders. Specifically claimed

CC is an isolated nucleic acid encoding an angiogenesis affecting

CC polypeptide. The nucleic acid has the ability to stimulate or inhibit at
 CC least one biological activity, e.g. vasculogenesis, angiogenesis,
 CC vascular permeability, endothelial cell proliferation, endothelial cell
 CC differentiation, endothelial cell migration, or endothelial cell
 CC survival. Also claimed is an isolated siRNA molecule targeted to the
 CC nucleic acid, and an antibody with specific reactivity to the nucleic
 CC acid or peptide, which may further comprise a detectable fluorescent
 CC label. Described is a method of treating an angiogenesis-related
 CC condition, and a method of detecting an angiogenesis-related transcript
 CC in a cell of a patient. The protein or nucleic acid are useful as
 CC pharmaceuticals for affecting vasculogenesis or angiogenesis. The
 CC angiogenesis-related disorder is cancer, retinopathy, macular
 CC degeneration, corneal ulceration, stroke, ischemic heart disease,
 CC infertility, ulcers, scleroderma, wound healing, ischemia, myocardial
 CC infarction, myocardiosis, angina pectoris, unstable angina, coronary
 CC arteriosclerosis, arteriosclerosis obliterans, Berger's disease, arterial
 CC embolism, arterial thrombosis, cerebrovascular occlusion, cerebral
 CC infarction, cerebral thrombosis, cerebral embolism, rubeosis
 CC proliferative vitreoretinopathy, chronic inflammation, inflammatory bowel
 CC disease, psoriasis, sarcoidosis, or rheumatoid arthritis. The present
 CC sequence is mouse gene NOC8009G23, identified as being expressed during
 CC angiogenesis based on microarray data.

DR		
XX		
PT	Isolated polypeptide for treating, preventing and/ or prognosing	
PT	disorders related to the musculoskeletal system including musculoskeletal	
XX	cancers and also for testing and detection e.g. diagnosis.	
PS	Example 2; SEQ ID NO 3363; 781pp + Sequence Listing; English.	
XX		
CC	The invention relates to novel genes (AAL34669-AAL37666) and proteins	
CC	(ABB03087-ABB04109) associated with the musculoskeletal system useful for	
CC	preventing, treating or ameliorating medical conditions e.g. by protein	
CC	or gene therapy. The genes are isolated from a range of human tissues	
CC	disclosed in the specification. The nucleic acids, proteins, antibodies	
CC	and (ant)agonists are useful in the diagnosis, treatment and prevention	
CC	of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the	
CC	adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,	
CC	lung, or urogenital; (b) immune disorders e.g. Addison's disease,	
CC	allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,	
CC	diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid	
CC	arthritis and ulcerative colitis; (c) cardiovascular disorders such as	
CC	myocardial ischaemia; (d) wound healing; (e) neurological diseases e.g.	
CC	cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,	
CC	bacterial, fungal and parasitic infections. Note: The sequence data for	
CC	this patent did not form part of the printed specification, but was	
CC	obtained in electronic format directly from WIPO at	
CC	ftp.wipo.int/pub/published_pct_sequences

 XX
 XX New nucleic acid molecule, useful for preparing a medicament for
 PT preventing, treating or ameliorating a medical condition e.g., cancer of
 PT musculoskeletal tissues or osteoporosis.
 XX
 XX Disclosure; SEQ ID NO 3363; 289pp; English.
 XX
 XX The invention relates to a novel isolated musculoskeletal system-
 CC associated nucleic acid molecule. The nucleic acid of the invention
 CC demonstrates cytoskeletal and osteopathic activities and may be useful for
 CC preparing a medicament for preventing, treating or ameliorating a medical
 CC condition such as cancer of the musculoskeletal tissues or osteoporosis,
 CC possibly via gene therapy or vaccine production. The current sequence is
 CC that of the human musculoskeletal system-associated genomic DNA of the
 CC invention. The current sequence is not shown within the specification per
 CC se but is available on the USPTO web-site
 CC <http://seqdata.uspto.gov/sequence.html?DocID=20040009488>.

The present invention relates to novel plant transcription factors from *Eucalyptus grandis* or *Pinus radiata*. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2 homeotic/homeodomain/homeobox/MADS, homeodomain zipper, CCAAT box elements and ERBs, zinc finger domains of type 2 CysHis2, CCAAT box elements and MYB.

 PT New genes and gene products isolated from human prostate, useful for
 PT treating or diagnosing tumor or cancer (e.g. prostate cancer or breast
 PT cancer), or as vaccines for treating or preventing these diseases.
 XX
 XX Claim 1; SEQ ID NO 423; 186pp + Sequence Listing; English.
 XX The invention relates to an isolated polynucleotide comprising any of

PT New polynucleotides derived from human prostate, useful for modulating
 XX immune response to prevent or treat cancer.
 PS Claim 1; SEQ ID NO 422; 188pp; English.
 XX
 CC This invention relates to novel isolated polynucleotides of human origin,
 CC particularly isolated from the human prostate. Specifically, it refers to
 CC the diagnostics and therapeutics comprising these novel human
 CC polynucleotides, and includes the derived probes, antisense
 CC oligonucleotides and antibodies thereof. The identification of these
 CC human prostate genes that can inhibit tumour growth is useful for
 CC understanding the progression and nature of complex diseases such as
 CC cancer, and hence they are important in the drug discovery process. The
 CC present invention describes these polynucleotides and encoded
 CC polypeptides as exhibiting cytostatic activity, and through gene therapy
 CC and/or vaccines they can be used to modulate the immune response for the
 CC prevention or treatment of cancers, particularly of the prostate, but
 CC also for breast, lung and colon cancer. This polynucleotide sequence is a
 CC human cDNA sequence useful for the treatment of cancer, used in an
 CC exemplification of the invention. NOTE: These sequences are not given in
 CC the specification but are provided on the WIPO website.

 DR
 XX
 XX New genes and gene products isolated from human prostate, useful for
 PT treating or diagnosing tumor or cancer (e.g. prostate cancer or breast
 PT cancer), or as vaccines for treating or preventing these diseases.
 XX
 XX Claim 1; SEQ ID NO 423; 186pp + Sequence Listing; English.
 XX The invention relates to an isolated polynucleotide comprising any of

CC	1477 sequences or its fragment, degenerate variant, antisense or complement. The polynucleotides and gene products are useful for treating or diagnosing tumour or cancer (e.g. prostate cancer, breast cancer, lung cancer or medullary carcinoma) in a subject (e.g. cattle, dogs, cats, rabbits, horse or human). The polynucleotides and polypeptides are also useful as vaccines for treating or preventing these diseases. The polynucleotides are useful for gene therapy. The present sequence is that of one of a group of polynucleotides (ABQ88745-ABQ90015) disclosed electronically as sequences of the invention. However only 1271 polynucleotide sequences are given, whereas 1477 polynucleotides and 91 proteins are claimed. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequence	CC	and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030194704

XX PS Claim 1; SEQ ID NO 689; 50pp; English.

XX CC The invention relates to a composition comprising a plurality of cDNAs

CC for detecting the altered expression of genes in an immunological

CC response. The invention also relates to a method of diagnosing or

CC monitoring the treatment of an immunopathological condition in a sample,

CC comprising obtaining nucleic acids from a sample, contacting the nucleic

CC acids of the sample with an array comprising the plurality of cDNAs under

CC conditions to form one or more hybridisation complexes, detecting the

CC hybridisation complexes and comparing the levels of the detected

CC hybridisation complexes with the level of hybridisation complexes

CC detected in a non-diseased sample, where an altered level of the detected

CC hybridisation complexes correlates with the presence of an

CC immunopathological condition. Also disclosed are an expression profile

CC comprising a microarray and a plurality of detectable complexes and a

CC method for identifying a plurality of polynucleotide probes. The cDNAs

CC are useful as hybridisable array elements in a microarray for monitoring

CC the expression of target polynucleotides. The microarray can be used in

CC the diagnosis of an immunopathology, such as Crohn's disease, asthma,

CC ulcerative colitis, hypersensitivity, irritable bowel syndrome,

CC osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in

CC identifying agents for the treatment of the diseases. The microarray may

CC also be used in drug discovery and development, toxicological and

CC carcinogenicity studies, forensics or pharmacogenomics. The composition

CC may also be used in purification of a subpopulation of mRNAs, cDNAs or

CC genomic fragments. This sequence represents a human cDNA of the

CC invention. Note: The sequence data for this patent did not form part of

CC the printed specification but was obtained in electronic format directly

CC from USPTO at seqdata.uspto.gov/sequence.html.

PT cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis and

PT infections.

XX Claim 15; SEQ ID NO 689; 16pp; English.

XX The invention relates to polynucleotides which are used as probes to

CC detect genes differentially expressed in an immunological response,

CC abundantly expressed in an immunological response and/or coding for a

CC polypeptide known to regulate blood cell biology. The polynucleotides are

CC useful in research and diagnostic applications particularly in cancer and

CC immunopathological conditions, such as AIDS, allergies, anaemia, asthma,

CC atherosclerosis, bronchitis, ulcerative colitis, diabetes, multiple

CC sclerosis, osteoporosis, pancreatitis, infections and arthritis. The

CC present sequence represents a human lymph node cDNA used to detect blood

CC cell and immunological response gene expression. Note: The present

CC sequence does not appear in the printed specification but was obtained in

CC electronic format from the USPTO web site

CC (seqdata.uspto.gov/sequence.html?DocID=20040077003).

 XX Novel diagnostic and therapeutic polynucleotides, used in disease
 PT diagnosis and for gene therapy of conditions such as cancer and
 PT thalassemia.
 XX
 XX Claim 1; Page 271; 299pp; English.

XX The present sequence for human diagnostic and therapeutic (dithp) cDNA
 CC sequence #33 is 1 of 71 (AAS03012-AAS03082) novel sequences described in
 CC the invention. The present sequence (Incyte ID No: 9027913dec) encodes a
 CC transcription factor molecule. The dithp polynucleotides may be used to
 CC diagnose a condition disease or disorder associated with human molecules.
 CC They can be used to identify the presence of similar nucleic acids. Dithp
 CC polynucleotides may be used to generate hybridisation probes for use in
 CC chromosomal mapping. Polypeptides (DITHP) encoded by dithp are used to
 CC screen for molecules which bind to them and modulate their activity.
 CC Dithp polynucleotides can be used for gene therapy of disorders such as
 CC severe combined immunodeficiency syndrome (SCID), cystic fibrosis,
 CC thalassemia, haemophilia resulting from Factor VIII or IX deficiencies,
 CC cardiovascular disorders e.g familial hypercholesterolaemia (FH), cell
 CC proliferative disorders e.g. cancers, neurodegenerative disorders,
 CC autoimmune/inflammatory disorders, infectious disorders and developmental
 CC disorders. The antibodies can be used to analyse protein expression
 CC levels

PT 830 Primers useful for synthesizing full length cDNA clones and their use
PT in genetic manipulation.

XX PS Claim 8; SEQ ID NO 3469; 1380pp + Sequence Listing; English.

XX CC The invention relates to primers for synthesizing full length cDNA
CC clones. 830 cDNA molecules encoding a human protein have been isolated
CC and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC been determined. Primers for synthesizing the full length cDNA are useful
CC for clarifying the function of the protein encoded by the cDNA. The full
CC length clones were obtained by construction of full length enriched cDNA
CC libraries that were synthesised by the oligo-capping method. The primers
CC enable the production of the full length cDNA easily without any special
CC methods. The present sequence is a full length human cDNA of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in CD-ROM format directly
CC from EPO

XX PT New oligonucleotide primers (830 cDNAs) useful for synthesizing full
PT length human cDNAs.

XX Example 1; SEQ ID NO 3469; 1340pp; English.

XX PS This invention relates to a novel primers useful for synthesizing full
XX length cDNA molecules that encode human proteins. Specifically, it refers
XX to secretory or membrane proteins that are potential therapeutic agents/
XX target molecules in the field of medicine, and in particular genes
XX encoding proteins that are associated with signal transduction,

CC glycoproteins and transcription. The present invention describes a method
CC for efficiently cloning a full length human cDNA from both the 5' and 3',
CC ends using the oligo-capping method. This polynucleotide sequence is a
CC full length human cDNA clone of the invention.

Identifying biomarker, useful for diagnosing, monitoring or prognosing a
disease, e.g. asthma, comprises determining the level of gene transcript
in blood cells.

Claim 38; SEQ ID NO 353; 74pp; English.

The invention relates to identifying at least one biomarker for a
disease, comprising determining the level of at least one gene transcript
in a subpopulation of blood cells obtained from at least one subject
having the disease. The at least one subject having the disease is a
member of a closed population (e.g. Cochin Jews). Also included are
diagnosing/monitoring/prognosing a disease in a subject, nucleic acid
molecules corresponding to one or more biomarkers (or their complement,
the biomarkers having been determined by using the method above), and an
array comprising the nucleic acid molecules. The biomarkers are selected
from AEE83593-AEE84375 or their complements. Determining the level of at
least one gene transcript comprises microarray hybridization, where the
microarray hybridization comprises hybridizing isolated nucleic acid
molecules to an array comprising second nucleic acid molecules. The first
isolated nucleic acid molecules are selected from RNA, DNA, cDNA, or PCR
products. The second isolated nucleic acid molecules is selected from
RNA, DNA, cDNA, PCR products, oligonucleotides, or ESTs. Diagnosing,
monitoring or prognosing a disease in a subject comprises determining the
level of at least one gene transcript in a subpopulation of blood cells
obtained from the subject (where the at least one gene transcript
corresponds to a biomarker, the biomarker having been determined using
the method above); and comparing the level of the at least one gene
transcript of step (a) with the level of the at least one gene transcript
in a reference gene transcript profile, thus determining the status of
the disease in the subject. The method is useful for identifying at least
one biomarker for a disease. The biomarker, array, and method are useful
for diagnosing, monitoring or prognosing a disease, e.g. cardiovascular,
immune, muscular, mood, autoimmune, respiratory, endocrine, neurological,
metabolic, or cellular proliferative diseases, where the respiratory
disease is asthma (a long list of diseases is included in the
specification). The present sequence is a human full-length cDNA that is
differentially expressed in subjects suffering from asthma (the subjects
were from the closed population of Cochin Jews).

XX
XX Nucleic acid ligands used in cancer screening, AIDS monitoring etc. -
XX bind to peripheral blood mononuclear cells, fibrin clots or carotid
XX arteries.
XX
XX Claim 23; Page 58; 138pp; English.
XX
XX AAT70705-T70803 represent the random regions from a degenerate ssDNA
XX library based on the sequence represented by AAT42819. These sequences
XX are all ligands specific for fibrin clots identified using the method of
XX the invention. The method of the invention is for identifying nucleic
XX acid (NA) ligands and NA ligand sequences to a tissue target selected
XX from peripheral blood mononuclear cells (PBMC's) (such as the ligands
XX represented by AAT70584-T70616), fibrin clots (such as the ligands
XX represented by AAT70617-T70704), and carotid arteries (such as these
XX ligands). The method comprises preparing a candidate mixture of NA
XX sequences, and contacting these with the tissue, whereby NAs having an
XX increased affinity to the tissue relative to the candidate mixture may be
XX partitioned from the remainder of the candidate mixture. The increased
XX affinity NAs are then partitioned from the remainder of the candidate
XX mixture, and are amplified to yield a mixture of NAs enriched for NA
XX sequences with a relatively higher affinity and specificity for binding
XX to the tissue, whereby NA ligands of the tissue may be identified. The
XX method represents a tissue SELEX (systematic evolution of ligands by
XX exponential enrichment) method. The NA ligands and epitopes and
XX macromolecules identified using the ligands can be used in diagnostic and
XX therapeutic applications. In particular, they can be used for e.g. cancer
XX screening, AIDS monitoring, detection and localisation of thrombi or
XX atherosclerosis diagnosis and therapy

XX The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences ABD01397-
CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

XX New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.
 XX
 PS Claim 14; SEQ ID NO 15227; 1765pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than S. aureus, S. typhimurium,
 CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
 CC prokaryotic essential genes. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at

 XX DR Improving plant productivity comprises introducing into the plant or
 PT propagation material an endophytic actinomycete that facilitates
 PT induction of at least one characteristic related to improved
 PT productivity.
 XX PS Claim 1; SEQ ID NO 1; 235pp; English.
 XX CC This invention relates to a novel method for improving plant
 CC productivity. Specifically, it refers to introducing into the plant or
 CC propagation material an endophytic actinomycetes or variant thereof,
 CC where the actinomycetes facilitate induction of a characteristic related
 CC to improved productivity. The present invention further describes
 CC metabolites of the actinomycetes microorganism such as auxin, gibberellin
 CC or cytokinin that are able to induce disease resistance in plants i.e.
 CC provide disease bio-control capabilities against pathogen infection.
 CC Accordingly, the method facilitates the improvement of cereal crop
 CC productivity including increasing germination by up-regulating plant
 CC growth promoting activities, as well as improving plant vigor or flower
 CC and fruit yield. Furthermore, the new actinomycete or metabolite is
 CC useful in the manufacture of a medicament for the therapeutic and/or
 CC prophylactic treatment of a mammalian or non-mammalian subject i.e.
 CC plant. As such, this method provides plant protectants and plant growth
 CC stimulants that exhibit antibacterial, antimicrobial, fungicide,
 CC insecticide and nematocide activities. This polynucleotide is the DNA
 CC sequence of an actinomycetes 16s ribosomal RNA sequence of the invention.

 XX DR New constitutive promoter sequences from maize, useful in genetic
 PT manipulation of plants.
 XX PS Claim 1; Page 39; 53pp; English.
 XX CC This sequence represents a maize histone H2B constitutive promoter. Maize
 CC H2B histones are constitutively expressed at a high level in meristematic
 CC tissue. This promoter was isolated and amplified from a maize seedling
 CC genomic library using an APL primer (AAZ11775) and a gene-specific
 CC primer, histone H2B gsp-1 (AAZ11776). The DNA from this first round of
 CC PCR was diluted and used as a template for a second round of PCR, this
 CC time using an AP2 primer (AAZ06802) and a second gene-specific primer,
 CC histone H2B gsp-2 (AAZ06803). The amplified DNA was sequenced for
 CC verification, cloned into the TA vector pCR2.1, minipreped and subjected
 CC to a third round of PCR using the AP2 primer and a third gene-specific
 CC primer, histone H2B gsp-3 (AAZ06810). This sequence, and other
 CC constitutive plant promoters (AAZ11766-Z11774), are capable of initiating
 CC constitutive expression in plant cells and have potential for use in
 CC vectors used to introduce and express heterologous DNA sequences in
 CC plants. Such a vector would comprise the heterologous DNA sequence
 CC operably linked to the promoter. The vector could then be used to
 CC transform a plant cell. A stably transformed plant could then be
 CC regenerated from the transformed plant cell. The heterologous sequences
 CC that could be linked to these constitutive promoters might include a
 CC pathogen-resistance gene, enabling pathogen-resistance proteins to be
 CC continuously expressed throughout the plant's tissues. Alternatively,
 CC antisense DNA could be used to inhibit the expression of a native gene to
 CC produce a desired phenotype. The antisense RNA transcript would bind to
 CC native mRNA and interfere with translation

 XX The invention relates to novel abiotic stress responsive polynucleotides
 CC and polypeptides. Also disclosed are vectors, expression cassettes, host
 CC cells, and plants containing such polynucleotides. Also disclosed are
 CC methods for using the polynucleotides and polypeptides to alter the
 CC responsiveness of a plant to abiotic stress. The invention is useful in
 CC agriculture. The nucleic acid is useful for determining whether a test
 CC plant has been exposed to an abiotic stress condition. It is also useful
 CC for selecting an agent that alters abiotic stress regulated
 CC polynucleotide expression in a plant cell, and to identify a homolog or
 CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
 CC molecule and the polypeptide encoded by it are useful in altering the
 CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
 CC stress, osmotic stress or any of their combinations. The present sequence
 CC is used in the exemplification of the invention

PT New isolated nucleic acid detection reagent for detecting 1000 or more

PT genes from Drosophila and for elucidating cell signaling and cell-cell

PT interactions.

XX

XX Claim 1; SEQ ID NO 38426; 2lpp + Sequence Listing; English.

PS

CC The invention relates to an isolated nucleic acid detection reagent

CC capable of detecting 1000 or more genes from Drosophila. The invention is

CC useful in developmental biology and in elucidating cell signalling and

CC cell-cell interactions in higher eukaryotes for the development of

CC insecticides, therapeutics and pharmaceutical drugs. The invention

CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-

CC ABB72072). The sequence data for this patent did not form part of the

CC printed specification, but was obtained in electronic format directly

CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS

XX

XX The invention relates to sixty six novel isolated Drosophila melanogaster

CC G-protein coupled receptors (GPCR). The GPCR proteins and nucleic acids

CC are useful in the treatment and diagnosis of GPCR-related conditions. The

CC GPCR proteins and nucleic acids are also useful for identifying

CC modulators of GPCR proteins for use as insecticides. The nucleic acid can

CC also be used to detect mutations in GPCR genes and gene expression

CC

CC products such as mRNA. AAS57072-AAS57203 represent D. melanogaster G-

CC coupled protein receptor genomic and coding sequences of the invention

XX

XX New isolated G-protein coupled receptor useful for identifying modulators

PT as potential insecticides, to determine the biological activity of the

PT protein and for identifying compounds that modulate receptor activity.

PT

XX

XX Claim 4; SEQ ID NO 106; 130pp; English.

PS

XX

XX The invention describes an isolated protein (I) consisting or comprising

CC an amino acid sequence selected from fully defined 66 G-protein coupled

CC receptor amino acid sequences (S1), as given in the specification, an

CC allelic variant of (S1), an orthologue of (S1) or fragment of (S1). (I)

CC is useful for identifying an agent that binds to (I) which comprises

CC contacting the protein with an agent and assaying the contacted mixture

CC to determine whether a complex is formed with the agent bound to the

CC protein. (I) is useful for identifying modulators as potential

CC insecticides, to determine the biological activity of the protein (a

CC panel of multiple proteins for high-throughput screening), as targets for

CC identifying agents for use in human drugs and for identifying compounds

CC that modulate receptor activity. An antibody (II) that selectively binds

CC to (I) is useful for assessing normal and aberrant subcellular

CC localisation of cells and monitoring a treatment modality. A nucleic acid

CC (III) encoding (I) is useful for drug/insecticide screening to identify

CC compounds that modulate G-protein coupled receptor (GPCR) nucleic acid

CC expression, diagnostic assays for qualitative changes in GPCR nucleic

CC acid that lead to insecticidal activity/tolerance, to detect mutations in

CC GPCR genes and gene expression products such as mRNA, and as

CC hybridisation probes for determining the presence, level, form and
CC distribution of nucleic acid expression. A host cell comprising a vector
CC containing (III) is useful for conducting cell-based assays involving the
CC GPCR protein or its fragments, and identifying GPCR protein mutants. This
CC sequence encodes a fruit fly G-protein coupled receptor (GPCR).

XX
XX Disclosure; SEQ ID NO 19750; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/hematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX DR
XX PT Isolated polypeptide for treating, preventing and/ or prognosing
XX PT disorders related to the musculoskeletal system including musculoskeletal
XX PS cancers and also for testing and detection e.g. diagnosis.
XX
XX Example 2; SEQ ID NO 2799; 78lpp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
XX (ABB03087-ABB04109) associated with the musculoskeletal system useful for
XX preventing, treating or ameliorating medical conditions e.g. by protein
XX or gene therapy. The genes are isolated from a range of human tissues
XX disclosed in the specification. The nucleic acids, proteins, antibodies
XX and (ant)agonists are useful in the diagnosis, treatment and prevention
XX of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
XX adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
XX lung, or urogenital; (b) immune disorders e.g. Addison's disease,
XX allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
XX diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
XX arthritis and ulcerative colitis; (c) cardiovascular disorders such as
XX myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
XX cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
XX bacterial, fungal and parasitic infections. Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX Isolated nucleic acid molecules encoding musculoskeletal system

PT associated polypeptides, useful for detecting disorders, e.g. cancer.

XX Disclosure; SEQ ID NO 2799; 321pp; English.

XX The invention describes an isolated nucleic acid molecule comprising a

CC sequence encoding musculoskeletal system associated polypeptides useful

CC for detecting disorders, e.g., cancer or cancer metastases, in animals or

CC humans. The nucleic acid stimulates re-vascularisation of ischaemic

CC tissues associated with conditions such as thrombosis, arteriosclerosis,

CC and other cardiovascular conditions; treats wounds due to injuries,

CC burns, post-operative tissue repair, and ulcers; stimulates angiogenesis

CC and limb regeneration; stimulates neuronal growth; can treat and prevent

CC neuronal damage occurring in certain disorders or neurodegenerative

CC conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-

CC related complex; stimulates chondrocyte growth, thus they can be used to

CC enhance bone and periodontal regeneration and aid in tissue transports or

CC bone grafts; prevents skin aging due to sunburn by stimulating

CC keratinocyte growth; prevents hair loss, since FGF family members

CC activate hair-forming cells and promotes melanocyte growth; stimulates

CC growth and differentiation of hematopoietic cells and bone marrow cells

CC when used in combination with other cytokines; maintains organs before

CC transplantation or for supporting cell culture of primary tissues;

CC induces tissue of mesodermal origin to differentiate in early embryos;

CC increases or decreases the differentiation or proliferation of embryonic

CC stem cells, besides, hematopoietic lineage; modulates mammalian

CC characteristics, such as, body height, weight, hair colour, eye colour,

CC skin, percentage of adipose tissue, pigmentation, size, and shape (e.g.,

CC cosmetic surgery); modulates mammalian metabolism; changes mammal's metal

CC state or physical state by influencing biorhythms, cardiac rhythms,

CC depression, tendency for violence, tolerance for pain, reproductive

CC capabilities, hormonal or endocrine levels, appetite, libido, memory, or

CC stress; increases or decreases storage capabilities, fat content, lipid,

CC protein, carbohydrate, vitamins, minerals, cofactors or other nutritional

CC components. This sequence encodes a novel human musculoskeletal system

CC antigen. Note: The sequence data for this patent did not form part of the

CC printed specification, but was obtained in electronic format directly

CC from the US patent office at

CC ftp.seqdata.uspto.gov/sequence.html?DocID=20020147140

 XX (HUMA-) HUMAN GENOME SCI INC.
 PA Rosen CA, Ruben SM, Barash SC;
 PI WPI; 2004-090458/09.
 XX New nucleic acid molecule, useful for preparing a medicament for

PT preventing, treating or ameliorating a medical condition e.g., cancer of
PT musculoskeletal tissues or osteoporosis.
XX Disclosure; SEQ ID NO 2799; 289pp; English.
PS
XX
CC The invention relates to a novel isolated musculoskeletal system-
CC associated nucleic acid molecule. The nucleic acid of the invention
CC demonstrates cytostatic and osteopathic activities and may be useful for
CC preparing a medicament for preventing, treating or ameliorating a medical
CC condition such as cancer of the musculoskeletal tissues or osteoporosis,
CC possibly via gene therapy or vaccine production. The current sequence is
CC that of the human musculoskeletal system-associated genomic DNA of the
CC invention. The current sequence is not shown within the specification per
CC se but is available on the USPTO web-site
CC <http://seqdata.uspto.gov/sequence.html?DocID=20040009488>.

 (HUMA-) HUMAN GENOME SCI INC.
 PA Rosen CA, Barash SC, Ruben SM;
 XX MPI; 2001-451930/48.
 DR New cardiovascular system related polynucleotides and polypeptides,
 XX useful for diagnosing, treating and/or preventing disorders of the
 PT cardiovascular system.
 XX
 PS Claim 1; SEQ ID NO 2314; 674pp; English.
 SS Sequences AAS35741-AAS35942 represent genomic DNA molecules, which encode
 CC the cardiovascular system antigen polypeptides of the invention.
 CC Cardiovascular system antigens and their associated polynucleotides are
 CC useful in the diagnosis, treatment and prevention of various types of
 CC disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
 CC chickens or sheep. A pathological condition can be determined by
 CC detecting the presence or absence of a mutation in a cardiovascular
 CC system antigen polynucleotide. The treatable disorders include autoimmune
 CC diseases such as rheumatoid arthritis, hyperproliferative disorders such
 CC as neoplasms of the breast or liver, cardiovascular disorders such as
 CC cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,
 CC nervous system disorders such as Alzheimer's disease, infections caused
 CC by bacteria, viruses and fungi, ocular disorders such as corneal
 CC infection, endocrine disorders such as premature labour and infertility,
 CC gastrointestinal disorders such as Crohn's disease, renal disorders such
 CC as glomerulonephritis and respiratory disorders such as asthma and
 CC pleurisy. The polypeptides can also be used to aid wound healing, to
 CC prevent skin aging due to sunburn, to maintain organs before
 CC transplantation, to regenerate tissues and in chemotaxis. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX
PA (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Ruben SM, Barash SC;
XX
XX WPI; 2003-743766/70.
XX
XX New cardiovascular system related polynucleotides and polypeptides,
PT useful for preventing, treating, or ameliorating a medical condition,
FT such as cancer of cardiovascular tissues and cancer metastases.
PT
XX
XX Claim 1; SEQ ID NO 2314; 262pp; English.
XX
XX The invention relates to human cardiovascular system related polypeptides
CC and the polynucleotides encoding them. The polypeptides, polynucleotides
CC and antibodies to the polypeptides are useful for diagnosing a
CC pathological condition or a susceptibility to a pathological condition,
CC for preventing, treating, or ameliorating a medical condition, such as,
CC cancer of cardiovascular system tissues, proliferative disorders, foetal
CC and developmental abnormalities, haematopoietic disorders, diseases of
CC the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
CC arthritis), inflammation, allergies, neurological disorders (e.g.,
CC Alzheimer's disease, Parkinson's disease), cognitive disorders,
CC schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
CC diabetes, atherosclerosis, cardiovascular disorders, angiogenic
CC disorders, kidney disorders, gastrointestinal disorders, pregnancy-
CC related disorders, endocrine disorders and infections. The nucleic acids
CC are also useful for chromosome identification, radiation hybrid mapping
CC or long-range restriction mapping. The polypeptides and polynucleotides
CC may also be used as food additives or preservatives to increase or
CC decrease storage capabilities, fat content or other nutritional
CC components. This sequence represents human cardiovascular system related
CC genomic DNA of the invention.

/notes="Site 1: SalI; Site 2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGATCCAGAGCTCTTTTCTTTTNN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 20.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGATTCGAGTTAAATTAATCCCTCCCCCCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."

 prepared and sequenced in Mouse Genome Encyclopedia
 Project of Genome Exploration Research Group in Riken

was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adapted DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pW42 (G14732114[gb|AF129072.1]), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adapted mouse DNA was annealed to adapted vector DNA, and transformed into chemically-competent *E. coli* XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

   prepared and sequenced in Mouse Genome Encyclopedia
   Project of Genome Exploration Research Group in Riken
   Genomic Sciences Center and Genome Science Laboratory in
   RIKEN Division of Experimental Animal Research in Riken
   contributed to prepare mouse tissues. 1st strand cDNA was
   primed with a primer [5'
   GAGAGAGAGCGCGCGCACTCGAGTTTTTTTTTTTTTTVN 3'], cDNA was
   prepared by using trehalose thermo-activated reverse
   transcriptase and subsequently enriched for full-length by
   cap-trapper. Second strand cDNA was prepared with the
   primer adapter of sequence [5'
   GAGAGAGAGAGATCCAGAGCTCAATTAAATTAATTAACCCCCCCCC 3'].
   cDNA was cleaved with XhoI and SstI."

Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
Tissues were provided by Michela Pagiolini and Takao K. Hensch (
Laboratory for Neuronal Circuit Development Brain Science Institute
RIKEN 2-1 Hirose, Wako-shi, Saitama 351-0198 Japan ) whose
assistance we gratefully acknowledge. Please visit our web site
(http://genome.gsc.riken.go.jp) for further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
